## **DETAILED ACTION**

### ***Election/Restrictions***

1. Claims 72-86 have been withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected invention, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in the reply filed on 7/10/2009.
2. Applicant's election with traverse of Group I, claims 31-71 and 87-88 in the reply filed on 7/10/2009 is acknowledged. The traversal is on the ground(s) that the fact that the glue-coated element manufactured by the method can be glued to another identical glue-coated element is irrelevant to the issue. This is not found persuasive because the process as claimed requires two identical glue-coated elements glued together, which is not required in Invention I.

The requirement is still deemed proper and is therefore made FINAL.

### ***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 31-71 and 87-88 are rejected under 35 U.S.C. 102(b) as being anticipated by Kraft et al. (US Pat. 4,240,938).

Kraft discloses an adhesive for bonding two surfaces, in which after applied the moisture of the adhesive is reduced (evaporated) (see col. 1, ln. 49-56). The adhesive comprises

Art Unit: 1794

elastomeric or acrylate-containing binders. The substrates can be wood (see col. 14, ln. 22-26).

Example 28 shows the use of polyacetate ethylene dispersion having a glass transition temperature of 20oC, reading on the presently claimed invention. Moreover, since the reference teaches the same adhesive composition, it would inherently have the same chemical and physical properties as presently claimed.
